### **DETAILED ACTION**

1. Claims 1-15 were pending in the instant application at the time of the previous Office Action, mailed March 19, 2007. By the latest Amendment, filed July 12, 2007, claims 1, 7-9, 11, 12, 14, and 15 have been cancelled. Therefore claims 2-6, 10, and 13 remain pending and have been examined.

### ***Terminal Disclaimer***

2. The terminal disclaimer filed on July 12, 2007 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of US Patent 6,807,632 has been reviewed and is accepted. The terminal disclaimer has been recorded.

### **EXAMINER'S AMENDMENT**

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the Specification:

At page 1, lines 10-14, replace the paragraph with the amended paragraph as follows:

This application is a continuation of U.S. Patent Application No. 09/236,366, filed January 21, 1999, now US Patent 6,807,632, and claims the benefit of U.S. Provisional Patent Application No. 60/072,316, filed January 23, 1998, both of which are incorporated herein by reference for all purposes.

***Election/Restrictions***

4. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 2-6 and 10, drawn to a method of storing a digital asset in a digital repository, classified in class 726, subclass 30.
  - II. Claim 13, drawn to a method of deleting a digital asset from a digital repository, classified in class 705, subclass 50.

5. Inventions defined by Group I and Group II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination II has separate utility such as file management using secure trash deletion. Group I has a separate utility such as secure content delivery over a network. See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art due to their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

6. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

7. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

8. Claims 2-6, 10, and 13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

As for claims 2, 3, 6, and 10, the claims each recite the phrase: "generating a generated cryptographic hash identifier." The meaning of generating a generated value is unclear given the redundant phraseology. The Applicant may wish to replace the phrase with something akin to: "generating a cryptographic hash identifier" for clarity. Claims 4 and 5 are dependent on claim 3 and are therefore rejected on the same basis as is that claim.

As for claim 13, the claim recites the limitation "broadcast cryptographic hash asset identifier" in line 7. There is insufficient antecedent basis for this limitation in the claim. In addition, it is unclear from the claim language how this identifier is generated.
